

INSTRUCTIONS

These components are double-sided and can be printed out one of two ways.

If you are using clear plastic playing card sleeves, simply print and cut out all cards on both sheets, place a poker-sized card into the sleeve and slide one Distillation Tower Base into the front side and one Overtime Distillation Tower Base into the backside. The token may be formed with some glue and a disc.

The paper is also set up to be printed out on cardstock. Simply print page 1, reinsert the printed page on the opposite face, and print page 2. This should provide a nice double-sided print that can be then cut out.
