

Column Fish

Column fish score points based on the number of the same fish in the same column. The fish do not have to be next to each other in the column.

School Fish

School fish score points as long as the cards are next to each other. Examples shown above are all layouts that would score maximum points.

Anemones and Clown Fish

Anemones and Clown Fish score 7 points per pair if they are placed directly next to each other (left, right, up or down). Otherwise these cards score 0.

Lights & Heaters

Lights are placed above a column and score 2 points for each Fish Card with a light bulb icon in the column. Heaters are placed to the left of a row and score 2 points for each Fish Card with a flame icon in the row. These cards are placed outside the Aquarium. Thus, a column with a light could have 4 cards, and a row with a heater could have 7 cards.

These cards do not have to be placed directly next to another card, but a light must be placed above a column that has at least one card and a heater must be placed to the left of a row that has at least one card. In the example above, the green boxes are places where a light could be placed. The light could not be placed in the red box because there are no fish cards in that column.
